

# Cameo Mod - Harvester Balance Table (Corrected)

Sorted by Cash/Tick/Cost (descending). Formulas verified from engine C# source.

Formulas:  $T\_load = Cap * (BLD + 1)$  |  $T\_unload = \text{ceil}(Cap / BUA) * BUD + 1$  |  $T\_travel = D * 1024 / \text{eff\_speed}$

$T\_cycle = T\_load + T\_trav\_out + T\_unload + T\_trav\_ret$  |  $Cash/Trip = Cap * RV (RV = 25)$

$Cash/Tick = Cash/Trip / T\_cycle$  |  $Cash/Tick/Cost = Cash/Tick / Cost$  |  $D = 20$  | Terrain=Clear (80% tracked, 90% foot/swimsuit/chem/hover) | Chrono: ret=0

## Key Corrections from YAML Verification

- chem locomotor Clear terrain speed = 90% (not 80% as previously assumed).
- TS harvesters capacity = 45 (not 35). Harvester.Capacity is not a real engine field; StoresResources.Capacity from ^TDHARV is used.
- Noid Harvester: Speed=50, Cap=100, BLD=5, BUD=1, locomotor=chem (all corrected from YAML).
- Asian Alliance Drone Miner: Cap=4, locomotor=chem (second Mobile block overrides).
- Steel Consortium Miner: locomotor=hover (second Mobile block overrides).
- RA1 Heavy Industrial Miner: locomotor=tracked (inherits from ^RAHARV, not heavytracked).
